Foreword

Following several years of working hard building up a first class farming enterprise whilst bringing up four daughters, who are now settled with their own families, Brian and Sian have decided to retire from dairy farming as the best course of action at the present time utilising the farm for simpler, less labour intensive purposes in the future.

From the beginning the emphasis has been economical yields from grazed and ensiled grass earning the reputation for being amongst the best grass farmers in the locality. Concentrating latterly on converting grass into milk utilising Holstein genetics to breed a robust animal able to walk to grass on sound legs and feet whilst having well-formed milking vessels to carry large quantities of milk fat and protein. Supplementation of grazed grass and grass silage fed and the barrier in the winter has been a concentrate feed through out -of -parlour feeders topped up by a few nuts at milking time to ease flow through the parlour with an impressive 47 per cent of production from forage.

Mindful of sound conformation the has been to use stock bulls sourced from leading local herds where the dam and close relatives could be viewed to ensure the right type of animal would be bred. This policy has been extremely successful producing consistent crops of heifers that blend to form a smart, level productive herd that pleased the classifier whilst maintaining excellent production at all times. Routine classification has not been carried out recently due to pressure of work which does not give an up to date confirmation of the excellent type within the younger portion which, on inspection, are set to easily equal if not surpass their dams. Similarly the younger cows and potentially the heifers have acquired the natural milking ability of their female ancestors.

An all year calving pattern providing animals to suit all systems whilst the fresh group of heifers sired by Rhydygors Laser Jo will be one of the highlights of the day being smart powerful cattle exhibiting a natural will to milk in line with the remainder of the herd.

One of the best herds that will be sold this year and a sale not to be missed by anyone seeking replacement animals to suit any system or calving pattern.

Production Averages----- 7625 kgs 4.08 fat 3.25 protein 158 cells of which 3500 kgs produced from forage. These figures are taken from Kingshay costing analysis for the herd which regularly is amongst the highest milk from forage herds.

Milk Recording-Daily Automatic recording with the daily yields quoted are the seven day average on 25th May 2018. An updated figure will be available on sale day or prior to the sale from the vendors or auctioneers.

CPH No: 55/018/0048

TB Test date-24th April 2018

Transport and Lairage-All animals must leave the market on day of sale however they may return to the farm at the purchaser's risk.

The auctioneers will assist with transport arrangements to any part of the country-please contact prior to sale if possible.

Health Policy- Vaccinations Annual- IBR, BVD, Lepto, with Rotovirus vaccination to 1st May 2018.

Dry Cow Policy----- Cephimam tubing of all cows.

Service Details-Besides individual service details beef bulls have regularly run with the herd-a Limousin will run with the herd up to sale date with recent use of British Blue AI service as detailed. Calving details shown are those confirmed by veterinary scans with further scanning up to sale date available thereat.
